ListAndRename is a Windows desktop application designed to efficiently list files in a folder and export the list to file in XLSX, CSV, TXT formats. It also offers the functionality to rename files and folders with the new names provided in the list (xlsx and csv).

Description

This document serves as a comprehensive user guide for the Windows Desktop Application, **ListAndRename**.

Function

The application offers two key functionalities.

- Generate a comprehensive list of the contents within a folder, including all files and subfolders.
- Rename files and folders in bulk according to a user-provided list.

Pre-requisite

- The application is exclusively designed for Windows desktops and laptops running Windows 10 or newer versions.
- The application requires a minimum screen width of 1024 pixels and a minimum screen height of 720 pixels when displayed at 100% scale.

Version Control

ListAndRename

This application offers the following functionalities.

- 1. **Generation List** Generate a comprehensive list of files and folders within the specified path, drive, or folder, and save the output in various file formats, including CSV, XLSX, and TXT.
- Bulk Rename User updates the names of new files and folders in the list. This process can be conducted either manually or semiautomatically, depending on the user's preferences and the volume of records involved.

To rename files and folders, upload (or drag and drop) rename data file into the application. The application renames files and folders according to the specified list.

Note

Before renaming, the application verifies the following conditions.

If a new file or folder name appears more than once within same parent folder, the application displays an error message. It requires the user to address the issue and upload a corrected list, as a folder cannot contain files or subfolders with identical names.

If new names are found among the current names, the application displays a warning and requests confirmation to either proceed or cancel if the new file and folder names already exist in the current list. Attempting to rename a file or folder that shares a name with an existing file or folder may result in an error resulting in skipping the record for renaming.

The application disregards the record if the new name is same as the current name, or if either of the current or new names is blank.

The application does not rename files and folders that are locked, missing, or inaccessible due to reasons such as insufficient read or write permissions.

The application disregards records that contain invalid characters, which are not permitted as file name characters by the Microsoft Windows operating system.

•

1. Settings before you Start.

The application provides a dedicated **Settings** screen to adjust basic options according to your preferences and requirements.

You can open the settings screen by clicking the **Settings** button located at the **bottom-left corner** of the main window.

Clicking 'Settings' opens the settings screen next.

Settings
File name start with (Prefix) Filelist
 Include Date-Time in file name. Date for easy sorting (e.g. 20251026) yyyyMMdd Date as Text (e.g. October 26, 2025) MMMM dd, yyyy
Custom (e.g. "MMM dd, yy hh:mm tt" for Oct 26, 25 11:45 AM)
Default location to save list - (For Skip File Dialog or Auto Sav Default (Parent) * The list file will be saved in the parent folder of the selected input. Browse
☑ Load items as you scroll (faster and better for large lists)
Keep current sort order - List saved to file in the same order as seen on screen.
Spreadsheet color theme (.xlsx file) None Protect .xlsx sheet (except "New File/Folder Name' column)
Close

Available Settings

i. File Name Settings

These settings control how the file name for list file is generated when saving a list.

• File Name Prefix

The text entered here is automatically added before the folder name in the file name.

• File Name Suffix

The text entered here is automatically added after the folder name in the file name.

- Example: If the prefix is set to 'Filelist_' and suffix set to '_data' and file list is generated for a folder 'Documents,' the file name will be: Filelist_Documents_data
- Include Date-Time in File Name Enable this checkbox to include the date and/or time of list creation in the file name.

You can also:

• Choose where the date-time appears in the file name (before or after the prefix or suffix).

• Select format or enter a custom format for date/time.

- Examples:
- With the date-time format yyyyMMdd_hhmmss and placement set before the prefix, a list for the folder 'OldVersions' would be saved as: 20250624_091540_Filelist_OldVersions_
- With the date-time format MMM, dd yy hh:mm tt and placement set after the suffix, a list for the folder 'OldVersions' would be saved as: Filelist_OldVersions_Jun 24, 25 0915 am.

ii. Default Save Location

Specify where the output file should be saved:

Default location to save list - (For Skip File Dialog or Auto Sav The list file will be saved in the parent folder of the selected input.	Default (Parent) - Default (Parent) Last used Custom
---	---

- **Default** Saves the file to the parent folder of the listed folder. **Example:** If listing files from 'D:\Documents\Pictures,' the output will be saved to the 'D:\Documents' folder.
- Last Used Location Saves the list to the last location used by the application for saving file. Useful when generating multiple lists consecutively to the same folder.
- **Custom Location** Allows you to select a specific folder or drive where all lists will be saved. (Make sure current user has access to the folder/drive)

iii. List View Settings

Settings for loading of records to List View on the application.

☑ Load items as you scroll (faster and better for large lists)

Controls how the folder contents are displayed in the list view. When enabled, items are loaded incrementally as you scroll, improving

performance for large folders. Ideal for cases where you intend to save the list directly without scrolling through all items.

iv. Output File Settings

• Keep current sort order in the file.

When enabled, the list in the output file is sorted in same order as displayed on application list view . If **Group by Type** is also enabled, files will be grouped by type before sorting and sorting would applied be within the group.

• Spreadsheet Color Theme (for .xlsx files only)

Choose from multiple color themes for the output Excel file. The theme can also be changed just before of saving the file (unless **Auto Save** is enabled).

Protect Sheet (for .xlsx files only)

Useful for large lists intended for renaming operations. Protecting the sheet prevents accidental modifications to critical columns like file name or extension, which could cause unexpected results. You can disable this option if protection is not needed.

Tip: You can revisit these settings anytime to fine-tune the application based on your workflow.

.xlsx output file Color themes.

2. List Generation:

A. Start

Open the application by clicking the icon in the Windows Start menu or search for "ListAndRename" in the taskbar's Windows Search.

The application launches as illustrated below. The colour may vary based on the chosen theme. Please refer to the end of this document for details on the UI theme.

B. Open Folder

Position the cursor in the upper left corner of the application window and find the 'Folder' section.

- Select 'List without File Extension' if files are to be listed without file extensions.
- Select the check box 'List for Renaming.'

Selecting 'List for Renaming' adds an additional column to the list file for the new name. Only CSV and Excel files are utilized for the renaming process.

Select the check box 'Auto Apply / Refresh List.'

The 'Auto Apply / Refresh List' instantly generates a list of contents when a folder is selected or when any filter parameters are changed. If this option is not enabled, the user must click 'Apply' to generate the list.

Click the 'Pick' button to open the folder dialog, as illustrated below.

Browse For Folder	>
✓	
> 🖿 Windows (C:)	
> 📥 Local Disk (D:)	
> 🗰 External Backup Drive V1V2 (Y:)

Note – Drag and Drop folder to create list.

- To select a path or folder, simply drag and drop a folder or file onto the List view area.
- Dropping a folder will generate a list of its contents,
- Dropping one or more files will produce a list of the contents of the parent folder containing those files.

Cancel any ongoing process such as generating a list, saving a list, or renaming files by clicking the 'Abort' button. This button will turn red while an operation is in progress, indicating that the action can be halted.

					•		
Working							
Auto Fit Columns	Drop Rename Data File Or Click	¢	1	⇒	Abort	Reset	Close

Dropped object.

- If the dropped object is a folder: The application generates a list of the contents of the folder according to selected filters (see the next section for details on filters).
- If the dropped object is a file: The application generates a list of the contents of the file's parent folder according to selected filters (see the next section for details on filters).

• If the dropped object is a shortcut to a folder or file: The application offers to list the contents of the target folder or the parent folder of the target file.

Shortcut	found	×
?	The file is a shortcut to another file, folder, or shortcut. List contents of the target folder?	
	Click 'Yes' for contents of the target folder. Click 'No' for contents of the parent of the shortcut. Click 'Cancel' to cancel the list generation.	
	Yes No Cancel	

- If the dropped object is a shortcut to another shortcut: The application offers to list the contents of the final target folder or the parent folder of the final target file.
- The list might not be generated if the Shortcut target is redirected by Windows System File. (E.g., a shortcut file with target C:\Program Files may be redirected to C:\Program Files (x86))
- If the dropped object has **multiple items like more than one folder**, the application confirms with user if the user wants to generate lists for all the dropped folders. A message as shown below is displayed and user is asked to provide preferences.

Multiple	Items Detected	×
?	You dropped multiple folders and/or files. Do you want to create a list for **each** dropped folder? Yes — Process all dropped folders No — Only process the first item: D:\Documents Cancel — Abort Note: Dropped **files** are ignored, as their parent folders would produce the same result. If you intended to process all folders in the parent, consider dropping the parent folder instead.	
	Yes No Cancel	

• Filtering the list.

The application offers features to narrow down the list by applying filters based on names and file types.

i. Choose files or folders that contain a particular name or text within their title.-

Enter the name in the text box and choose the appropriate option from the dropdown menu.

The options available in the dropdown menu are listed below.

Name Contain

Files and folders with names that include the specified text.

Name start with

Files and folders that begin with the specified text.

Name end with

Files and folders with names that end with the specified text should be included in the search, ensuring that the file extension is part of the search term.

Name is.

Files and folders with names that exactly match the entered text, regardless of case, should include the file extension in the search term.

E.g., Create a list of files and folders that contain the word "Rose" by selecting the option "Name contains" and input "Rose" in the search box.

The application displays files and folders whose names contain "Rose" or "rose." For example, it includes entries such as Rosemerry, rose pink, Roseville etc.

Scope of list

In the content filter, choose the appropriate checkboxes to include the desired content in the list, such as Files, Folders, Subfolders, and Subfolder files. Selecting Subfolders and Subfolder files will encompass all contents within every folder located inside the specified folder or path.

Content		
Name contain	-	
🗹 Files	🗹 Sub folder Files	
Folders	Sub folders	Reset

ii.Additional filters based on file types.

The application determines which file types (extensions) to include or exclude from the list based on the status of the 'Exclude files' checkbox. If the checkbox is checked, entered file types are omitted; if unchecked, entered file types are included.

E.g., to filter the list of files, enter 'mp3, bmp' in the search box. The application lists only files the extensions .mp3, .bmp.

Name	Турө	Date Modified	Bytes	File Si	Unit	Parent
.BMP						
Painting_ (1).bmp	.bmp	2025:06:24 08:34:00	0	0.00	Byte	D:\Docum

Extensions, whether they include a prefixed '? or not, function in the same manner. For example, both "txt" and ".txt" result in same list.

An example of utilizing all available filters effectively.

An example of files with the .xlsx extension that include the word 'Family' in their names can be found by searching through subfolders and their contents. The listed files and folders are two records that contain 'Family' in their names. One is folder and other is file with extension .xlsx

Group by type – Check this checkbox if you want the list to be displayed in groups. For example, .bmp files can be grouped together, .mp3 files in another group, and folders in a separate group. Below is a list of files organized by their extensions.

iii. Other

(a) Sort

Sort the information by columns such as Name, Date, Bytes, or Parent folder, the application defaults to sorting the list by Name in ascending order. <u>When the list is organized into groups</u>, the sorting occurs within each group. For example, if sorted by name in ascending order, BMP files will be listed alphabetically, followed by CSV files listed alphabetically beneath them.

Sort			
Sort by Column	Byte(Size)	•	
Sorting Order	Ascending	•	Reset

Alternatively, clicking on the respective column header will sort the list according to the selected column.

(b) Displaying list on application

Auto Fit Columns Drop Rename Data File Or Click ← t ⇒ Abort Reset Clos	Auto Fit Columns	Drop Re	name Data File Or Click	= 1 ⇒	Abort	Reset	Close

The status section displays the following details about the selection:

- Access Restrictions: Indicates if there are any restrictions.
- Number of Files Selected: The total count of selected files.
- Number of Folders Selected: The total count of selected folders.
- Time Taken: The duration required to generate the list.
- Total File Size: The combined size of the selected files (folders are not included).
- Shortcut Status: Displays whether the dropped file is a shortcut. (Not visible in above image. It appears after 'Size.'
- Number of records shown This is useful is settings is checked to load items as you scroll. It displays number of records listed to list view

(d) 'Auto Fit Columns'

Adjust the width of the list view by clicking on 'Auto Fit Columns.' This action will expand the column widths, constrained by the available screen width.

Normal Column Width

Autofit column width

(e) Dive deeper in folder list.

Double-clicking a subfolder reveals its contents. For instance, in the example below, double-clicking the "Pictures" folder displays the files contained within it.

Double-clicking a file in the list produces a list of contents for the file's parent folder, provided that the parent folder differs from the currently selected folder.

(f) Clicking a shortcut in the list.

If the selected item in the list is a shortcut, application offers to list contents of the target folder or target file's parent folder.

(h) History

The application keeps a track of the source folder/drive for which content lists created in the current session. This can be accessed using the History buttons: the backward and forward arrows, as illustrated in the following images. Please note that the history is cleared when the application is closed.

History backward

Auto Fit Columns	Drop Rename Data File Or Click	= 1 ⇒	Abort	Reset	Close
listory forward					
		↓			
Auto Fit Columns	Drop Rename Data File Or Click	∈ 1 ⇒	Abort	Reset	Close

Note: The application retains only the folder/drive paths in the session history, not the previously generated lists of contents. On clicking the *History* button, the application generates a new list based on the folder's current contents.

C. Save List to file.

The default file name format is set as per the settings where user sets.

- 1. Prefix
- 2. Suffix
- 3. Include Date Time
 - a. Place datetime before/after prefix/suffix.
 - b. Date format (easy sorting, text or custom as selected in settings)

If the Date Affix checkbox is unchecked, the file name will default to name without date added to name. (This is like unchecking include date in the settings.

Save		_
Filename (List)	Filelist_Documents_	
Date Affix		Reset

- Maintaining the Date Affix is crucial for identifying the date and time of list creation, particularly in environments where there is a high rate of file creation, modification, or deletion.
- The Date Affix enables the generation of multiple lists within a folder while preserving the existing lists.
- The Affix is updated with the current date and time whenever application creates new list, updates, or selects a new folder or path for listing.
- Clicking the Reset Button refreshes the Affix to reflect the current date and time. However, if the user manually updates the Affix, it will not be automatically refreshed until a new folder or path is selected for listing.

- Check checkbox '.xlsx' to save the list to Microsoft Excel file. *
- Check checkbox '.csv' to save the list to CSV file. *
- Check checkbox '.txt' to save list to a text file.
 Checking multiple options allows you to save files in all the selected formats.
- Enabling the 'Auto Save' turns on automatic saving of the list in the selected file formats, eliminating the need for user intervention to click any buttons.
- The checkbox 'Open File(s)' is checked to automatically open the saved files. Useful when one format is selected and user does not want to browse through folders to open the newly generated list.
- Save a file without prompting the user to select a folder by checking the 'Skip File Dialogue' checkbox. By default, the application saves the file to the directory as per the settings (Default (Parent folder), Last Used location or Custom Location). If the selected path is a drive location, such as C:\ or D:\, and file location is set to default (parent), the file will be saved in the same location.

(The checkbox for "Skip File Dialogue" will be automatically selected if the Autosave feature is enabled and file will be saved to location as per the settings.).

Note

Saving a file may fail if the current user lacks sufficient write access permissions for the selected drive or folder. In this case, uncheck the 'Skip File Dialogue' option to choose a different save location or update settings.

Enabling the checkboxes for 'Autosave', 'Skip File Dialogue', and 'Open Saved File', along with any selected file formats, generates a list, saves it to a file, and opens the file automatically without requiring user intervention.

In the following example, dragging a folder into the application will generate a list, save it as a CSV file, and open the CSV file immediately.

🕤 Lis	tAndRename	Ab	ort Close

User gets confirmation of saved files as shown in example below.

Below shown confirmation is not shown if 'Open Saved files is' checked. Instead, files are directly opened.

If a list file with the same name already exists, the application appends a numeric suffix, such as 0000, 0001, 0002, 0003, ..., up to 9999, to the existing file name and then saves the file with the updated name.

This normally does not happen if date affix is added to file name, which changes for every new file list.

If user presses save button multiple times on the same list, it may create new files with numeric suffix added to file name as shown above as the file name and date affix remain same. The date affix can be updated to current time by pressing 'Reset' next to the date affix.

• Saving xlsx file by Microsoft Office Interop.

In uncommon situations, you might encounter the following message if the XML library is unable to generate an xlsx file. This message indicates that the application will create a xlsx file using Microsoft Office Interop Services.

.xlsx Dependency	
The application is about to create an .xlsx file using Mic services. This process requires Microsoft Office to be accessible by the logged-in user. The time required depends on the size of the data. If the or the application becomes unresponsive, you can click operation. For a faster alternative, you can save the list as a .csv opened in Excel. Click 'Yes' to proceed with writing to .xlsx (this may tak continue?"	installed, running, and e process takes too long k 'Abort' to cancel the file, which can also be
☐ Do not show this message again.	Yes No

Note

Saving a list in Microsoft Excel format typically utilizes the XML library, which functions effectively. However, if XML writing fails for any reason, the application will attempt to use Microsoft Office Interop services to save the list to an Excel file. In this case, the user must have an active Microsoft Office session on their computer.

In the rare event that the application cannot create an Excel file, it will save the list as a CSV file, which can then be opened in Microsoft Excel for further editing. Once opened, the CSV file can be converted into an Excel file.

Operations with Microsoft Excel files take more time than CSV files.

*Feature of saving to CSV or Excel is not part of basic (Free) version. The feature is activated by Add On or is available as part of free trial if applicable.

The saved file, whether in CSV or Excel format, is presented in the format shown below. Note that the text file does not contain distinct columns; however, the application maintains the original sequence of the text when writing the file.

The application includes a column labelled "New File/Folder Name" (Column B) in the file, if the "List for renaming" option is selected on application.

Column B contains identical values to those in Column A, the names of existing files and folders.

All cells, except for Column B, are protected to prevent accidental changes to the current file names and parent folder. This data is essential for renaming files and folders, which is done using the new names entered in Column B. (The sheet is protected only if 'Protect .xlsx sheet...' is checked I the settings.)

Certain Excel functions are not available on a protected sheet. To access these functions, you must unprotect the sheet by right-clicking on the sheet name and selecting 'Unprotect Sheet.'

Unprotect sheet to make changes.

Right Click sheet name -- > Click 'Unprotect.'

Note

Column I has hash codes used to check data integrity for rename file. **Do not change any value in column I**. Else the file (data) will cause an error.

Before editing the generated list file, create a backup copy to safeguard against potential data corruption, typographical errors, or any other issues that could render the file unusable or lead to significant, irrecoverable changes.

a) Update new name.

The file includes a column titled "New File/Folder Name" (Column B), which is duplicated from the "Name" column (Column A). (Refer to the image below.)

b) Spreadsheet functionalities to update new names.

• Advanced users utilize functions such as add, remove, replace, append, truncate, concatenate, and trim to efficiently update names across multiple records. To access these functions in a Microsoft Excel file, it is necessary to unprotect the sheet.

- If the number of records is manageable, you can manually enter or edit new file and folder names. This can be accomplished on a protected sheet, as column B is unlocked by default.
- c) Precaution
 - **Do not remove** or alter file extensions in Column C unless you intend to change the file type and are confident in your actions.
 - **Do not modify the File Parent** in Column H, as doing so will result in the record being skipped with a log message indicating "File not found."
 - The application will disregard records if the new file name matches the current file name. It is recommended to eliminate such records from the file if you do not plan to rename those files or folders.
 - Avoid using invalid filename characters such as <, >, |, \, :, and "," in filenames, as the application will ignore these records and log an error.
- d) Save updated file.

Save and close the file with the updated names.

Note -

When a CSV file is opened in Microsoft Excel, you can save it by clicking the Save icon or using the shortcut Ctrl + S. If you close the file directly, a 'Save' dialog will appear, prompting you to save the file as an Excel format instead of a CSV.

5. Upload or drop file for Renaming.

The input for renaming the data file offers three distinct methods for uploading files to the application.

1. Drag and drop file to button.

Upload a file simply by dragging and dropping it onto the button displayed on the application screen.

To select the file, choose it from the list and click the Open button.

The application initiates the renaming of files and folders based on the provided list immediately after the file upload is completed.

CSV files offer quicker reading and renaming capabilities. If the renaming process is taking too long or you wish to cancel it for any reason, simply press 'Abort.' The text will turn red while the renaming operation is in progress.

If the uploaded file was not created using ListAndRename, a notification will be displayed.

If the uploaded file is generated by the ListAndRename application from another version or computer, the following warning message is displayed. This warning does not stop the renaming process.

When uploading a file for renaming, you may encounter the following messages:

Duplicate Names in Input File: This message appears when the input file list contains duplicate names for files or folders within the same parent folder.

Conflict with Existing Names: These messages are shown when an existing file or folder has the same name as a new file or folder name. This may create conflicts, and the affected files may not be renamed.

The application also warns if the renaming data file list is created earlier than 2 days before current date. (

Renaming Status

The application provides a status update for the renaming activity as shown below. It displays:

- The number of records uploaded.
- Records ignored due to errors.
- Records successfully renamed.
- Records skipped.

Rename data file D:\2025	0626_073053_Filelist_E	00000000000000000000000000000000000000	00.xlsx

Cleared Log

Below is an example of the file and folder names before and after renaming:

Points to Note

- The application checks the uploaded file for its type and blank records, then begins the renaming process by reading each record. It provides a status report detailing the number of files renamed or not renamed. Files and folders may not be renamed if:
 - They are not accessible.
 - They have been changed, removed, or locked by another process or user.

6. Application UI

The application offers themes to suit your colour preferences. Select a theme from the drop-down menu. Theme options include:

System Light

Hold the left mouse button on any blank area of the left panel and drag the panel/form to the desired location.

7. View Current License Information

License Type Basic Type Basic Basic (Free) Valid till Always available Add On Durable Information not available Valid till Validity expired Subscription No active subscription Valid till -	designed for efficien comprehensive list of directory and allows formats. Users can in the .xlsx or .csv fi renaming with ease	powerful Windows desktop application ty managing folder contents. It generates a of files and sub folders within a selected you to save this list in xlsx, .csv or .bt easily update file and folder names directly ile, which can then be used to perform bulk and accuracy.
Save to _xlsx and _csv - Click to unlock Add-On! Consent to Collect Data	Basic Valid till Add On Durable Valid till Subscription Valid till Save to .xlsx and .cs	Always available Information not available Validity expired No active subscription - w - Click to unlock Add-On!

Note : License management of Product and all Add Ons is done by Microsoft Store. The above form only shows information available at Microsoft Store. You need to be connected to the internet to fetch information from Microsoft Store

The application collects usage data and user information if user explicitly allows collection of data. The consent data collection form can be reached through about screen as show below.

8. Error Log

The application creates a log at location,

WindowsDrive:\Users\<Username>\AppData\Local\Temp

with file name in format yyyy_MM_ddListAndRename_Log.txt. (yyyy is year, MM is month and dd is date , e.g., 2025_06_25

For example,

C:\Users\admin\AppData\Local\Temp\2025_06_25ListAndRename_Log.txt.

Name	Date modified	Туре	Size
2025_06_25ListAndRename_Log.txt	6/25/2025 8:28 PM	Text Document	70 KB

In a rare scenario, if application encounters an issue, refer log to check the last message to check at what stage the issue was encountered.
